

The Ultimate "Dining Out" Experience

BRIEF AOK HISTORY:

In early 2005, we knew there had to be a better way to provide homeowners with a quality outdoor entertaining environment. We wanted to eliminate the hassle of construction and the long wait often times associated with such an endeavor. We wanted to build the highest quality outdoor kitchens in the world and install them for homeowners throughout the country.

Our years of designing and engineering have accomplished our product goals and resulted in industry-changing outdoor kitchens built to satisfy the discriminate taste to which we cater. In late July 2009 our national marketing campaign began.

AOK Kitchens: Stainless steel is the ultimate for outdoor durability and every **AOK Kitchen** is an integrated one-piece welded system built with 18-gauge, 304 stainless steel.

Compare: Typical "hook-um-up" modular systems built with inferior stainless steel and use of rivets to hold pieces together that become weak points resulting in rapid deterioration and replacement.

AOK Kitchens: **AOK** drawers and storage compartments are wrapped with sheeted stainless steel that provides optimum protection for stored kitchen articles. Elevating the rear of all storage compartments ½" assures complete drainage of any blowing rain that ever does make it past the front door flange. Easy cleaning is another wonderful aspect of **AOK's** stainless steel cabinet construction.

Compare: Framed access doors opening to brick, stone or wood interiors that can be easily soaked with inclement weather will ruin and rust kitchen articles and become home to untold numbers of insects and other varmints.

AOK Kitchens: **AOK** Kitchens are precision-engineered for easy connectivity to a single-phase 60-amp breaker panel that supplies pre-wired and hidden kitchen appliance plugs, backsplash receptacles and optional canopy light dimmer switches. All utilities are installed in a concise single stub-up area that is clearly identified during a pre-installation appointment.

Compare: The difficulty of fitting appliances and utilities in brick and stone cutouts. In the words of Richard Feis, builder of the Greenhaven Show Home in Atlanta, "I usually have to tear them out and start over several times," . . . even then, the final results are less than desired.

AOK Kitchens: Intricately-designed custom countertops with backsplash and full-length 3-tier bars are precision-cut and professionally installed.

Compare: Single-dimension designs with non-precision cutouts.

AOK Kitchens: Well-appointed outdoor kitchens are different than well-appointed indoor kitchens. It's not just countertop and storage space but the right application of each. It's not just fingertip cooking control but ease of food preparation and self-service.

Compare: Outdoor kitchen designs that are basically a "grill on a wall" with a few access doors splashed around without a proper flow of planned food service.

AOK Kitchens: When it comes to the kitchen aspect of *your* outdoor environment, durability, ease of installation and a well-appointed *outdoor* kitchen will be important considerations that can make every event, *The Ultimate "Dining Out" Experience*.

Compare: Nothing Compares with **AOK Kitchens** !
